Observed training dynamics; different generated batches, not matched validation curves
Binary mixed groups exclude signal from crop-cost reward or GiGPO step advantages
Accuracy of ALL generated training rollouts
Mixed binary-outcome groups in update / 128
Executed crops / generated trajectory
Logged actor entropy (mask / reduction differ)
Logged upper clip fraction (token / sequence differ)
Cumulative generated MAIN prompt-group occurrences
GRPO
DAPO
GSPO
GiGPO
RLOO control
RLOO + first-action
RL step
